SUMMARY

Backend-focused Computer Science student building data-intensive systems, scraping pipelines, and automation tools. Experienced in handling authenticated scraping, high-frequency polling systems, and identifying real-world system vulnerabilities. Interested in backend engineering, distributed systems, and security-focused roles.

SKILLS

Languages	Python, JavaScript, Java
Backend	Node.js, Express, Flask, REST APIs
Databases	MongoDB, PostgreSQL
Systems	Linux, Cloudflare Workers, Azure, AWS
Security	Burp Suite, XSS, CSRF, SQL Injection (Basics), Authorization Testing, AppSec
Tools	Git, Selenium

PROJECTS

- **Automated Result Notifier**
Built a monitoring system that continuously tracks university result portals and delivers instant notifications to 60+ users. Designed efficient polling strategies to handle dynamic content while minimizing redundant requests. Improved reliability of detection under unpredictable release timings.
- **Code Sync (Cross-Platform DSA Aggregator)**
Built authenticated scraping pipelines using session tokens to extract user activity from platforms like LeetCode and GeeksforGeeks. Designed data normalization logic to unify heterogeneous datasets into a single structured dashboard. Solved challenges around session handling, data consistency, and cross-platform mapping.
- **Morphide (IoT Development IDE)**
Developed an IDE for microcontroller workflows with device fingerprinting and firmware inspection capabilities. Built mechanisms to identify connected hardware and detect mismatched or unknown firmware states. Integrated AI-assisted tooling to streamline embedded development workflows.
- **SKCET CGPA Calculator**
Developed and deployed an SGPA calculator widely used by SKCET students, processing 17,000+ calculations in one semester and ranking first on Google for “SKCET SGPA calculator”.

EXPERIENCE

Freelance Web Developer 2024 – Present

- Built and deployed production websites for small businesses with focus on performance and usability.
- Optimized asset loading and page structure to improve load times and mobile responsiveness.
- Translated client requirements into functional systems with clean UI and stable backend integration.

ACHIEVEMENTS

- **Vulnerability Disclosure:** Identified a critical **Broken Object Level Authorization (BOLA)** vulnerability in a live EdTech platform exposing exam content before scheduled release; reported responsibly to prevent exploitation.
- **Infrastructure Load Testing:** Simulated high request throughput against college systems to identify server bottlenecks under burst traffic.

EDUCATION

Integrated M.Tech in Computer Science and Engineering 2023 – 2028
Sri Krishna College of Engineering and Technology (SKCET)
